DETAILED ACTION

1. Claims 1-29 are allowed.

Examiner's Amendment

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Edward L. Pencoske on 9/18/2009. The purpose of the amendment is to fix a lack of antecedent basis in the specification for a "computer readable storage medium", which without proper basis could be construed to comprise carrier waves. The specification provides support for a hardware memory device containing instructions for carrying out the disclosed methods on page 3, paragraph [0011]. Claims 28 and 29 have been amended as follows:

28. (currently amended) A ~~computer readable storage medium~~ memory device carrying a set of instructions which, when executed, perform a method comprising: shifting data along either rows or columns of a plurality of processing elements arranged in an N x N array, where N is greater than three until each processing element in each row or column has received all the data originally held by every other processing element in that row or column, respectively; and selecting from said received data, where each of the received data is a candidate for selection, a final output based on a

processing element's position.

29. (currently amended) A ~~computer-readable storage medium~~ memory device carrying a set of instructions which, when executed, perform a method comprising: shifting originally held data along either rows or columns in an array a number of times equal to $N-1$ where N equals the number of processing elements in the rows and columns, respectively, and N is greater than three, such that each processing element in each row or column receives the data originally held by every other processing element in that row or column, respectively; and outputting data from each processing element as a function of that element's position in one of the row and column, where each of the received data is a candidate for outputting.

Examiner's Reasons For Allowance

The following is an examiner's statement of reasons for allowance:

The claims are allowed in view of the Terminal Disclaimer filed 7/30/2009. In particular, the prior art, independently or in combination, does not anticipate and reasonably teach the specific aspects of a method for generating a reflection of data in a plurality of processing elements, comprising: shifting the data along either the rows or columns of the plurality of processing elements arranged in an $N \times N$ array, where N is greater than three until each processing element in each row or column has received the data originally held by every other processing element in that row or column, respectively; and selecting from said received data, where each of the received data is a candidate for selection, a final output based on a processing element's position.

The prior art made of record teaches selecting and shifting data through arrays of elements, however, individual locations for each element are not used to determine the selection of data. Further, each element does not select its data based on its location, where each of the received data is a candidate for selection.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to JOHN LINDLOF whose telephone number is (571)270-1024. The examiner can normally be reached on Monday-Friday 8-5.
